 **WELLSPRING®** | **WIND ENERGY**

Support the development of clean, renewable wind energy right here at home

Meeker Cooperative members who choose to purchase electricity through our Wellspring Wind Energy program can invest in wind energy that has been generated from Minnesota wind farms.

✦ Investing in wind can help reduce America's dependence on foreign fuel sources. Wind power is a domestic energy source that is also inexhaustible. It can be used so that fossil fuels are kept in reserves for times of need.

✦ Wind isn't subject to the price instability of overseas and/or domestic fossil fuels. Although wind energy is only available when the wind blows, new technology is being developed that will allow the energy produced by wind to be stored for longer periods of time.

When you purchase Wellspring Wind Energy, you are decreasing carbon dioxide emissions from fossil fuels, which some scientists believe to be the cause of global climate change. The more members take advantage of this opportunity, the greater the impact on our environment.

Here's how it works:

- You may purchase Wellspring Wind Energy in 100-kilowatt hour blocks up to the amount of energy you use per month.
- Each block costs \$1 in addition to your base electric rate and will be included on your monthly bill.
- You may opt out of the program at any time by contacting Customer Service.

Invest in the future

When you become part of the Wellspring family, you can be assured that your commitment to wind energy will result in the construction of new wind generators that will help lessen our country's reliance on non-renewable sources of energy. That's good for us now and for future generations.
